2026 Crop Circles

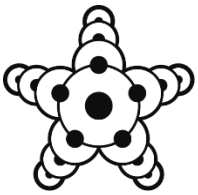

ZA GBR 26/04/04 The ring stands for the Earth. Two comets cross the Earth at right angles before rounding the Sun and returning to strike the planet. As a symbol, this is known as a Celtic cross, poplar in Ireland, but strangely, no crop circles have been found there. The construction is too irregular to be anything but man made.

ZA GBR 26/04/29 This crop circle is undoubtedly man made due to the roughness of the edges.

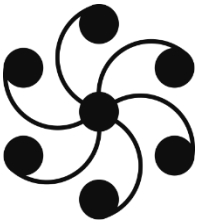

It is portraying the movement of a comet with its coma as it goes around the Sun. Only half of the comet is producing the coma, which implies it is quite far from the Sun itself, or the coma isn't completely depicted to minimize unnecessary lines. Man-made circles are to be expected at the start of the season. True circles will reach their high point later on in July.

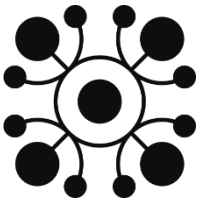

ZA GBR 26/05/08 This is a man-made crop circle, easily discerned primarily by the irregular way the crops are flattened in the six complete circles.

I believe the hoaxers are regularly influenced by the true circle makers, in a subconscious or superconscious way, in creating a reasonable facsimile of a true circle.

In this example, we have the central circle of Comet B with a coma, surrounded by the five largest fragments which are in the process of breaking away from their original position. They also display comas. This crop circle would supposedly take place between the Asteroid Belt and Mars. The comas displayed here are unrealistically large for a true crop circle.

ZA GBR 26/05/10 Extra lines were added in the next three days giving the circle a flowery appearance. It seems that six fragments are being ejected from the comet, but it is more likely that the trajectories of the six comets striking in water are shown from a view of Earth at night. The inferior quality of the circles categorizes this as man-made.

ZA GBR 26/05/22 This crop circle is man- made, as evident from the poorly made large circles. The same defects are apparent in the prior ones on the 8th and 10th of May - possibly all three due to the same team.

As a suggestion for a future asteroid impact, this circle imitates Comet C, which possess four large fragments. The two smaller circles for each fragment are smaller fragments breaking off as the larger fragments separate from the nucleus. The impact date is estimated to be c. 2199 in the Arabian Sea.

ZA GBR 26/05/31 Up till now all 2026 crop circles have been man made, as is this one, due to its irregularities. Since true crop circles communicate information about future comet strikes, we would expect them to dwindle and cease shortly before the first strike.

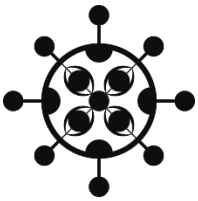

In this instance, the central circle represents an impact for three comets The surrounding ring is the area of damage/destruction. The outer broken ring is the atmosphere of Earth, our planet. The three breaks indicate the directions the first three comets will come from before impact. (as a man made circle, the directions are off somewhat). On the left is Comet A, the right is the Warning Comet, and at the bottom is Comet B. Each comet is accompanied by large amounts of dust, gas, and small particulate matter which contaminates a portion of the atmosphere. (The empty space above the inner ring.) Large and small fragments and the debris trail are not shown here. Actually, the comets are not equal in size, so the effect on the atmosphere isn't equal, as implied by the crop circle. Comet B is several times greater than either of the other two.

ZA GBR 26/06/16 This crop circle is another man-made effort for the same reasons given for prior circles. It would suggest that the same team is responsible for them all. The photos all show the circle upside down from my viewpoint

Using the corrected image, we have three comets impacting in the central circle from three different directions. Each comet will be seen by many human eyes before impact. The two smaller circles for each comet represent large fragments ahead of the main body or nucleus. Two large fragments is inaccurate, except for Comet A, the one coming in from the left and striking in the Atlantic ocean. The bottom is Comet

B, coming in from below and striking in the Arctic Ocean. The Warning Comet comes in from the right and strikes in the Pacific Ocean.

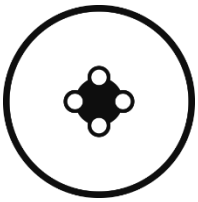

ZA GBR 26/06/21 This is man-made. Four comets will be seen by the human eye before impact within the conglomerate center. These are the four chastising comets. The other four will be beyond the horizon, A, F, the Warning Comet and the Sun Comet, and not seen before impact. This disagrees with other crop circles.

ZA SUI 26/06/23 Most people are revolted at the idea that ETs have been fully informing us through crop circles that they will be directing seven asteroids or comets to strike the Earth, and one to hit the Sun. We have been given full information so no one can claim we were struck without warning. It isn't a question of being stabbed in the back when it comes to comets. Since true crop circles seem to have ceased, it should not be too long before the first comet strikes.

This particular crop circle is man-made due to the irregularities within the three circles. It shows the trajectories of two fragments leaving the rotating comet (the central circle) at an early stage of the comet's progress into the inner solar system.

ZA GBR 26/06/24 This one is man-made due to the ridges within the large ring and inner circle. The large ring represents the Earth. The inner circle is the impact point of a comet. The four small rings are gas molecules associated with the impact, perhaps indicating four different kinds of gas. Small rings have been a standard way of showing gases. Examples are found on page 55 of my free e-book.

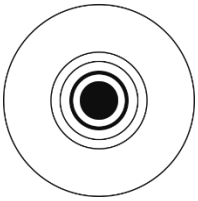

ZA FRA 26/06/28 A comet on the bottom left approaches impact point in the center (the middle circle). The resulting impact causes seismic tremors and sound waves in the air. This may or may not be man-made

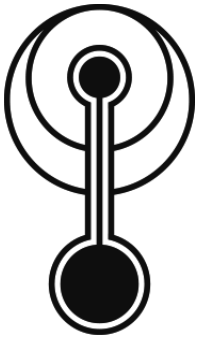

ZA GBR 26/06/29 The imperfections in this crop circle identify it as man-made. The general impression is of a flower in full bloom. The ten petals may be a reference to Comet B which exhibits ten large fragments. The conglomerate impact point for the fragments and the two halves of the nucleus is in the center which is surrounded by a small circle of damage or destruction.

According to The Heck Hypothesis, new species can't appear without a comet impact. The flower here suggests a new species partially replacing the need for protein when livestock is at a minimum in the future. The "plant of renown" of Ezekiel 34:29 is intended to eliminate world hunger. These new species can be created by human research geneticists. However, no new animal species are indicated in crop circles.

ZA GBR 26/07/03 The outer ring is the Earth. The comet in the center with the one ringed coma will create two rings of damage/destruction. This man-made circle underestimates the size of the two rings unless the impacting object is actually only a major fragment.

ZA GBR 26/07/03 The first circle here is quite straightforward; It is man-made. The large circle at the bottom is a comet shown headed toward an impact area above. The line surrounding the comet is the coma, composed of dust and gas. The ring surrounding the impact area is the anticipated area of damage or destruction caused by the comet impact. The large ring is the Earth. Based on the position of the damaged area, this is probably Comet B, intended to strike in the Arctic Ocean.

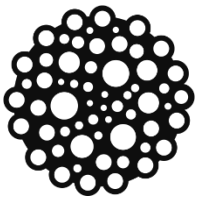

The second circle is also man made. It is probably the same comet as above. The large thin ring represents the Earth. Inside is the impact area of a comet with its coma. The two thin rings probably represent earth tremors or earthquakes caused by the comet's impact. Besides an earthquake, there will also be a very loud sound generated by the strike.

ZA GBR 26/07/04 This crop circle has the familiar theme of three comets striking in water. The refraction effect of seeing an object in water has been used extensively by the circle makers in the past. The same irregularities found in all the 2026 crop circles also appear here, indicating man made status. The comets involved are A, B, and the Warning Comet (the photo is upside down). Comet A could be coming anytime now that true crop circles seem to be discontinued.

The outer ring represents the Earth. The background triangle with rounded corners approximates the standard triangles

found on Section 14 of my free e-book. It signifies that the three strikes have been approved by Higher Powers and cannot be avoided. The area seemingly affected by the comets is actually exaggerated.

ZA GBR 26/07/05 For crop circles, small or tiny rings are the standard indication for gas molecules in the coma or the tail of a comet. Dust is represented by tiny circles. This example shows a concentrated mass of different sized gas molecules, probably occurring when the comet is closest to the Sun. The smallest rings would be hydrogen gas, with the larger ones representing water vapor, carbon dioxide or methane.

This circle is obviously man made, but it does show, along with previous ones, some imagination in planning and execution.

ZA GBR 26/07/07 Three planes intersect in the center of this man-made crop circle. The planes describe the trajectories of three comets. Comet A descends from the top going downward from left to right. Comet B ascends from the bottom going upward from left to right. The Warning Comet goes from right to left on the level plane. These directions aren't entirely accurate for this man-made circle. They should be rotated at least 15 degrees to the left.

Behind the trajectories the affected portion of the Earth is indicated. Imagine a map of the Earth starting with the middle of the Atlantic Ocean displaying Europe and Asia, and ending with the middle of the Pacific Ocean. The Upper Boundary would be the Arctic Ocean and the Lower would be the Equator.

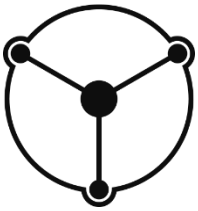

The use of planes for trajectories is an original idea for crop circles, also the indicated map area. However, the actual impact areas for the comets aren't depicted. The central line of intersection is a man-made invention that may not actually exist.

ZA GBR 26/07/11 Another man-made crop circle with new creative features not appearing within the mainline, authentic examples of the past. Unfortunately, when man made crop circles deviate from the past, they lose whatever believability and/or information quality they might potentially possess.

The large ring represents the entire space of the solar system, extending out to perhaps the Oort Cloud. The 'square' in the center is composed of two right triangles combined together to form a team of two space vehicles, a standard depiction in prior circles. These two are assigned to accompany the seven comets or asteroids headed to Earth impact. Each impact causes a flash, as indicated by the seven flashes above and below the vehicles. The flashes may be in two sets since the two vehicles perform separate functions.

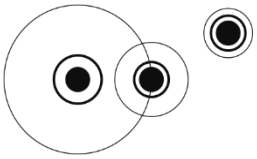

The two circles on either side represent comets which will be guided to Earth impact. The seven comets are located on opposite sides of the solar system (3 on one side and 4 on the opposite side) within the Asteroid Belt, the Kuiper Belt, or even in the Inner Oort Cloud. None of this interpretation can be counted upon since the imagination behind man made circles is not truly relevant to legitimate circles. Esthetically, we could visualize the migration of birds or butterflies as they go south in Autumn and north in Spring.

ZA GBR 26/07/12 This crop circle takes us back to the 1990's when they were all simple and sincere, except for the man-made category, to which this example belongs.

The large ring is a planet in the solar system. The circle in the middle is a comet or asteroid passing close enough to the planet to lose three fragments due to its increase in velocity from the planet's gravity. The comet's trajectory is also changed as a result. This is deliberately done by the circle makers as they guide the comet to final Earth impact.

Each fragment seems to possess a partial coma - to be expected if the fragments permanently enter the atmosphere of the planet. Will a comet lose part of its mass to a planet before Earth impact? With man-made circles there is no reason to take appearances seriously.

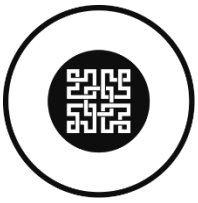

ZA GBR 26/07/14 We have a new figure not found in prior circles - super thin rings which are difficult to see.

An asteroid or comet with a coma appears to be headed toward impact with Earth on the left. The large thin ring represents Earth. Just before striking the Earth, the comet passes in front of the Moon, (the smaller thin ring), suggesting it is night. Two comets will impact at night, A and B - this one is probably A.

The major problem with the crop circle is the identity of the smallest thin ring on the right. It would not be a planet since the comet would blot it out. It might be a large satellite in geo-synchronous orbit such as the James Webb telescope. But they are not circular in shape. There are usually incongruities in man-made circles that make interpretation risky if not impossible. This is another example of them.

In fairness, this year's man-made circles show a level of ingenuity and number not seen in prior years. It suggests there may be more than one team making all 20 of them.

ZA GBR 26/07/16 The outer ring is the Earth. The inner circle is the conglomerate impact area of four asteroids or comets.

In the center we have a protective square, well known in crop circles, indicating that each of the four surrounding comet trajectories will be protected from human interference. These four are the chastising comets, the largest of the seven destined to strike the Earth.

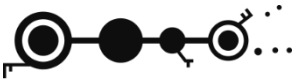

The odd rectangular depiction of each trajectory is another first for the 2026 man-made circles. The trajectory begins inside the square near the Earth and continues until it goes around the Sun and back to the Earth for final impact. The indicated adjustments to the trajectories are not necessarily believable for this man-made circle, since they are identical for all four comets. Their placement attempts to suggest their individual angles of Earth impact, but don't agree with prior circles, unless the circle rotated 45 degrees.

Interestingly, a prior circle on July 21, 2005, in Austria displayed a similar rectangular style. It was called "The Tibetan Knot of Life." a non-astronomical example, most likely man-made.

ZA GBR 26/07/18 Here we see the Earth at night. The 13 flashes represent the impacts of 13 major fragments - 10 for Comet B, 2 for Comet A, and 1 for the Warning Comet. Inside is the well-known image of an impact crater, where the direction of impact is from left to right. The crop circle suggests that all 13 occur at night. This contradicts prior circles, for example, the early one in the UK for July, 1991.

The lay of the crop is original, implying a man-made origin. How it was accomplished goes beyond the typical board and rope method. The energetic circle makers have already exceeded the total counts for 2024 and 2025 by a substantial margin, perhaps to rekindle interest in the phenomenon

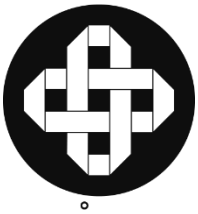

ZA GBR 26/07/21 This is another circle returning to the 1990's level of circle making - a second sign it is man-made, along with the usual inferior lay of the crop. True crop circles don't return to the past - they are always gaining in meaning.

The "F" sign, so common in the 1990's, indicates rotation of the asteroid or comet, and is discussed fully in Section 4 of my e-book.

The largest circle in the center is probably the planet Jupiter, not a solid body but with a large atmosphere, as suggested by unusual lay of the crop. On the left a comet with a large coma emerges from Jupiter's influence, perhaps Comet a, to approach the Asteroid Belt. On the left, a second comet also passes Jupiter, but mysteriously doesn't have a coma until much later on, possibly because the passing is much further away from Jupiter than Comet B. This one could be the Warning Comet, striking Earth about 2 years later then Comet A.

The five small circles on the right represent the five remaining comets impacting Earth after the first two shown here.

ZA GBR 26/08/04 See the original photo. Them vertical shaft on the right is bisected by the horizontal shaft, an error suggesting man-made status.

The image is known as “Solomon’s Knot” perhaps indicating the complex relation between the spiritual world (vertical lines) and the material world (horizontal lines). As a cross it may represent the suffering caused by the predicted comet strikes.

The vertical lines represent the trajectories of Comets B (bottom to top) and E (top to bottom). The horizontal lines represent the trajectories of Comets C (left to right) and D (right to left). The dot at the bottom stands for a comet, but it is probably a conglomerate indication for all four comets.
